EDUCATION

Manhattan University

Bachelor of Arts: Computer Science, GPA: 3.4

Graduation: May 2026

Riverdale, NY

Coursework: Cybersecurity Lab, Data Structures & Algorithms, Software Engineering, Computer Security, Operating Systems

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, SQL (SQLite), CSS, HTML, MATLAB, Java, Bash

Security/Networking: Suricata (IDS), Scapy, Wireshark, Nmap, TLS/Cookie Auditing, OAuth 2.0/MFA, SEED Labs (TCP/IP, PKI)

ML/AI: Qdrant, Pinecone (Vector Databases), HuggingFace, RAG, Prompt Engineering, LangChain, Semantic Search, Lightning.ai

Infrastructure/Tools: Docker, ServiceNow, osTicket, Vercel, Firebase, Git/GitHub/GitLab, Azure DevOps, Linux, MacOS, REST APIs, Node.js

Spoken Languages: English, French, Creole (Trilingual Speaker)

PROJECTS

Self-Healing Endpoint Dashboard

2026

Python, psutil, rich

Personal Project

- Built a real-time endpoint monitoring dashboard in Python that detects high CPU/resource usage processes and auto-generates support tickets.
- Leveraged AI-assisted vibe coding practices using Cursor, GitHub Copilot, Claude Code, and ChatGPT to accelerate application development, rapidly prototype features, generate/refactor code, troubleshoot issues, and improve developer productivity.
- Implemented ticket throttling logic (30-second cooldown per category) to prevent alert flooding, mirroring real SOC/helpdesk noise-reduction practices.
- Used rich's Live display for a continuously updating terminal UI; published as a portfolio piece demonstrating IT operations tooling.

Mini SOC Detection Pipeline

2026

Suricata, Scapy, Python, osTicket API, Ubuntu Server (ARM64)

Personal Project

- Standing up an end-to-end detection pipeline: Scapy-crafted traffic → Suricata IDS alerts (eve.json) → Python parser → automated osTicket creation.
- Applied AI-native development workflows to build and iterate on GenAI applications, REST APIs, AI agents, and internal tools, translating business ideas into functional prototypes while maintaining code quality, testing, and Git-based development practices.
- Configured and deployed on a self-managed Ubuntu Server VM, handling ARM64/Apple Silicon virtualization constraints.

osTicket ITSM Deployment (Docker)

2026

Docker, PHP, MySQL, Apache, Linux

Personal Project

- Deployed a self-hosted osTicket ITSM instance using a custom Dockerfile after resolving MySQL 8 authentication and missing dependency issues in the upstream image.
- Debugged container build failures end-to-end (broken base image, libicu-dev dependency) to produce a stable, reproducible ticketing environment.

Web Application Vulnerability Scanner

2026

Python

Personal Project

- Built a scanner that audits live websites for missing security headers, weak TLS configuration, and insecure cookie flags.
- Designed a companion URL risk-assessment architecture combining Google Safe Browsing, VirusTotal, and PhishTank with an LLM-based secondary layer for phishing/brand-impersonation detection.
- Used prompt-driven development and iterative AI-assisted coding to integrate LLMs, RAG workflows, APIs, and external tools, quickly experimenting with emerging AI frameworks and converting proof-of-concepts into scalable application components.

Google OAuth 2.0 Authentication Service

Fall '25 Semester

Node.js, Express, Google Auth Library, Firebase, Passport.js

CMPT 369 – Cybersecurity Lab

- Engineered a standalone OAuth 2.0 verification API using Express.js and the google-auth-library to protect user resources.
- Integrated Firebase Authentication for step verification (MFA), enforcing a second authentication factor to harden account security.

CMPT 490 Capstone: Turkeyapp

Spring '26 Semester

Python, SQLite, Qdrant, Lightning.ai

Manhattan University

- Collaborated in a 4-member Agile/Scrum team to build a secure full-stack app for image storage, organization, and semantic search.
- Implemented backend authentication, storage management, and image upload/import/export; delivered final demo to department.

EXPERIENCE

Account Executive

September 2026 – Present

Barker Consulting

Manhattan, NY

- Test and troubleshoot business internet connections, routers, and network equipment to identify connectivity issues and verify proper operation.
- Visit businesses in assigned territories to assess current internet and networking setups, assisting clients with Verizon FiOS services and upgrades.
- Communicate with business owners to evaluate service needs and document customer details in CRM-based workflows to support service recommendations.

MU Summer Conference Assistant

May – August 2025

Manhattan University

Riverdale, NY

- Managed check-ins and room logistics for guest groups of several hundred students every two weeks, resolving facility issues in a fast-paced environment.

Supervisor

June 2022 – January 2025

Legoland

Goshen, NY

- Supervised daily operations, trained new staff on procedures and safety protocols, and coordinated shift coverage during peak hours.

Camp Counselor

June – August 2021

Hebrew Educational Society Summer Camp

Brooklyn, NY

- Supervised 10–12 campers and led activities while enforcing medical and dietary safety protocols.
